

Cell estimation in the 10x Cell Ranger-ARC Multiome samples S4, S5 and S6:

Experiment ID	S4	S5	S6
Target nuclei	10000	10000	10000
Estimated cells for multiome CellRangerAC	4513	1720	4335
Estimated cells for multiome ATAC	8171	4613	10616
Estimated cells for multiome GEX (EmptyDroplets)	7241	1466	8413

- Transposition ATAC events is better in multiome run in all samples.
- TSS enrichment is the same.
- Fragments in peaks is variable.
- Empty droplets calculate none-empty around the +/-20% expected value of cells

Droplet Elbow plot for reference:
