

Heatmap showing the enrichment of cell types across different gene sets. The y-axis lists cell types: Astrocyte, Excit. Thal, Hb, Inhib. Thal, Microglia, Oligo, and OPC. The x-axis lists gene sets: Discordant_Linked_DAR, Linked_DAR_depleted, Linked_DAR_enriched, Linked_OCR_depleted, Linked_OCR_enriched, and Unlinked_DAR. A color scale for $-\log_{10}(p)$ ranges from 0 (yellow) to 3 (dark red). Marginal bar charts show the number of genes (n_{genes}) for each cell type and gene set. Specific p-values are highlighted: 2.66 for Astrocyte in Linked_DAR_depleted, 2.06 for Astrocyte in Linked_DAR_enriched, and 1.73 for Hb in Linked_DAR_enriched.
